

SMART HOPPER

The SMART Hopper from Innovative Technology brings coin payment technology into the 21st Century. Ideal for all machines, the SMART Hopper eliminates the need for multiple hoppers, sorters and reduces the cost of handling coins internally.

The SMART Hopper is a multi coin payout unit capable of accepting all coins passed through the coin mechanism. The host machine sets the desired coins needed for payout and transfers any unwanted coins into the cashbox. It also sets the desired float level before collection so all excess coins travel straight to the cash box. The SMART Hopper pays out higher than conventional hoppers so customers no longer have to reach down to retrieve coins. This higher payout increases security and allows for easier design.

Operating at an industry leading 12 coins per second the SMART Hopper is the new solution to coin starvation.

Recommended Applications

- Automated change transactions
- Gaming, AWP
- Self Serve and Retail
- Vending
- Kiosk
- Casino
- Parking and Ticketing

Options

- Coin dataset availability: full listing on our website

Features

- Collects, discriminates and stores coins for future payout
- Jam free, high-speed payout
- Secure unit, lockable to host machine
- Direct communication with coin mechanism, host machine need only communicate with the SMART Hopper
- 'Best deal' - optimised payout selection
- Eliminates the need for coin sorter

Technical Data

- 1500 coin capacity (€1)
- 12 coins per second payout rate
- Compact dimensions: 280 x 230 x 134 mm
- Weight: 2.4kg empty 13.7kg full
- Power supply: 24V
- eSSP protocol
- Secure exit sensor
- USB on board
- Accepts coins 18 to 28.5mm in diameter and 1.65 to 3.2mm thick
